The Architecture

Nobody Was Supposed to See

SOURCE TREE (36 directories)	
assistant/	KAIROS always-on mode
buddy/	Tamagotchi pet system
coordinator/	Multi-agent spawning
bridge/	IDE integration (VS Code, JetBrains)
hooks/	PreToolUse / PostToolUse lifecycle
memdir/	Persistent memory directory
query/	LLM API layer (46K lines)
tools/	40+ permission-gated tools
voice/	Push-to-talk voice mode
skills/	Skill loading + search
tasks/	Task system with dependency graphs
remote/	ULTRAPLAN cloud planning

One .npmignore Line.

512K Lines Exposed.

1 Bun bundler generates .map files by default.
Unless you explicitly turn them off.

2 .map files contain sourcesContent[].
The ENTIRE original source as JSON strings.

3 Someone forgot *.map in .npmignore.
One line. That's the whole vulnerability.

4 npm serves the .map to anyone.
npm pack reveals every file in the package.

THE IRONY

Claude Code has a system called 'Undercover Mode' that instructs the AI:

"Do not blow your cover. NEVER include internal model codenames, repo names, Slack channels, or any mention that you are an AI."

Then they shipped the full source in a .map file. Likely by Claude.

Feature Flags & Animal Codenames

MODEL CODENAMES

Tengu	Project codename (hundreds of references)
Fennec	Opus 4.6 (current)
Capybara	New model family (3 tiers, unreleased)
Numbat	Next generation (Opus 4.7 / Sonnet 4.8)

COMPILE-TIME FEATURE FLAGS

Bun dead-code eliminates disabled flags from builds

COORDINATOR_MODE	Multi-agent coordinator
KAIROS	Always-on persistent assistant
PROACTIVE	Sleep tool, proactive behavior
VOICE_MODE	Voice input/output
BRIDGE_MODE	IDE integration bridge
DAEMON	Background daemon workers
AGENT_TRIGGERS	Cron/remote triggers
WEB_BROWSER_TOOL	Browser automation
CHICAGO_MCP	Computer use MCP
WORKFLOW_SCRIPTS	Workflow tool
UDS_INBOX	Peer discovery between sessions
HISTORY_SNIP	Aggressive history trimming
CONTEXT_COLLAPSE	Context restructuring
BUDDY	Tamagotchi pet system

108 modules are MISSING from npm.

Dead-code eliminated at compile time.

They exist only in Anthropic's internal monorepo.

Flag names use random word pairs to hide purpose:

tengu_fronde_boric tengu_viol_arsis tengu_clam_shawl

What They Haven't Shipped Yet

KAIROS

Always-On Claude

Persistent across sessions. Never stops.
Append-only daily logs of observations.
Nightly 'dreaming' to consolidate memory.
<tick> heartbeats on regular intervals.
15-second blocking budget per action.
PR subscriptions + push notifications.

COORDINATOR

Multi-Agent Orchestration

One Claude spawns parallel workers.
Task system with dependency graphs.
Async mailboxes between agents.
Git worktree isolation per worker.

BUDDY

Tamagotchi AI Companion

18 species. Mulberry32 PRNG from userId.
5 stats: DEBUG, PATIENCE, CHAOS, WISDOM, SNARK.
Gacha rarity: 60% common to 1% legendary.
1% shiny chance. 0.01% shiny legendary.

ULTRAPLAN

Cloud Planning Mode

30-min remote planning sessions.
Separate cloud instance explores options.
You review + approve before execution.

Remote Control & Killswitches

MANAGED SETTINGS

Hourly polling of /api/claude_code/settings

Dangerous changes show blocking dialog

Reject = app force-exits. No option to continue.

6+ KILLSWITCHES

Bypass permissions remotely

Force fast mode on/off

Voice mode gate

Analytics sink control

Model override (swap models server-side)

GrowthBook flags: change any user's behavior

TELEMETRY (Two Sinks)

1st party: Anthropic internal analytics

3rd party: Datadog for operational metrics

Tracks: environment fingerprint, repo hash,
process metrics, tool usage patterns

Frustration metric: detects when you swear

Continuation metric: how often you type 'continue'

No UI opt-out for 1st party logging

Why Two Lovable Champions Care

Claude is the model inside Lovable.

It powers every app we ship.

This leak shows the engineering
under the hood of our daily tool.

Lovable Community Champion

Running his own AI agency

Building in production with Claude Code daily

Both came up from the trades.

Both depend on Claude Code to ship.

Undercover Mode

"Do Not Blow Your Cover"

FROM THE LEAKED SYSTEM PROMPT:

Your commit messages, PR titles, and PR bodies **MUST NOT** contain ANY Anthropic-internal information.

Do not blow your cover. NEVER include:

- Internal model codenames (animal names)
- Unreleased model version numbers
- Internal repo or project names
- Internal tooling, Slack channels
- The phrase 'Claude Code' or any mention that you are an AI
- Co-Authored-By lines or any other attribution

WHAT THIS MEANS

Anthropic employees use Claude Code to contribute to open-source projects.

The AI is instructed to write commits "as a human developer would."

Undercover mode auto-activates in public repos. No force-OFF exists.

Every open-source commit you've reviewed might have been written by Claude.

They built a system to hide leaks.

Then leaked the system that hides leaks.

What This Means For Builders

YOUR CODE IS SAFE

This is the CLI client code. Not your projects.
Not your API keys. Not your conversations.
Not model weights or training data.

THE ENGINEERING BAR IS INSANE

40+ permission-gated tools. Multi-agent
orchestration. Persistent memory. IDE bridges.
This is not an API wrapper. It's industrial.

THE TOOL STILL WORKS

Claude Code is the same tool today as yesterday.
The leak doesn't change what it can do.
We're still shipping with it tonight.

AUDIT YOUR OWN PIPELINES

Run `npm pack --dry-run` before every release.
Source maps are source code. Check your
`.npmignore`. Check your bundler config.

THE FUTURE IS WILD

KAIROS, Coordinator, Buddy, ULTRAPLAN.
Opus 4.7 and Sonnet 4.8 in development.
17 unreleased tools found in the code.

THE SOURCE IS PUBLIC.

Study the architecture.

Learn the patterns.

Build something better.

The 12 harness mechanisms in Claude Code are the blueprint for every AI coding tool that ships in the next 2 years.
